

ThrallRadio Investor Brief

ThrallRadio is building a planetary network that observes and analyzes radio spectrum activity. The platform transforms inexpensive SDR receivers into distributed sensors generating real-time RF intelligence. Opportunity: • Global RF visibility across aviation, maritime, telecom, and broadcast domains. • AI-driven signal analysis and historical archives. • Scalable host network model where contributors deploy listening stations. Revenue Model: • Subscription intelligence platform. • Enterprise analytics and monitoring. • Developer API ecosystem. • Hardware ecosystem and licensing. Vision: Create the world's largest electromagnetic intelligence dataset and make radio activity searchable, analyzable, and actionable.

Global SDR Listening Network
