# ThrallRadio Global Media Kit

The Living Map of the Electromagnetic World

ThrallRadio is a distributed radio intelligence platform created by inThrall Global Corporation. It connects low■cost Software Defined Radio devices, edge AI processing, and a global orchestration platform to reveal activity across the electromagnetic spectrum. The system allows individuals and organizations to observe radio signals in real time while building a planetary■scale dataset of RF activity. ThrallNumbersStation nodes running on everyday PCs, tablets, or Android devices contribute local coverage to a global sensing network. Edge processing and AI pipelines transform raw signals into searchable intelligence including transcribed audio artifacts, classified signal events, and historical archives.

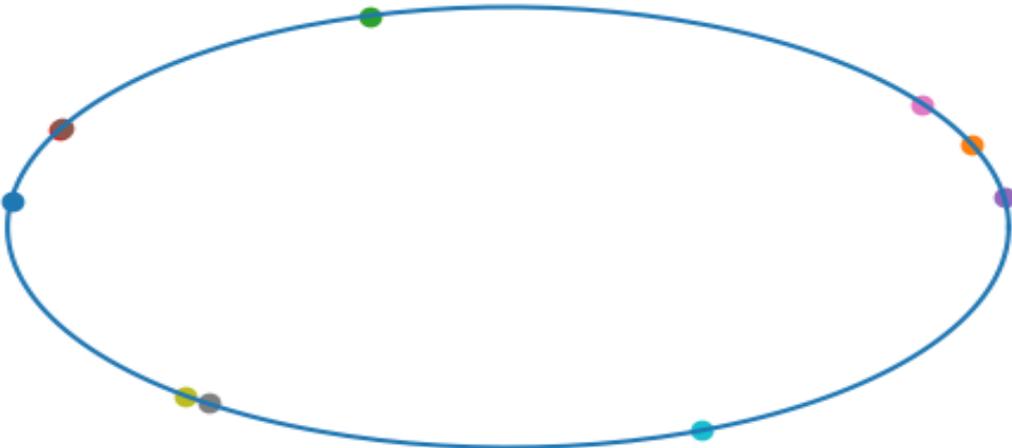

Global SDR Listening Network

ThrallNumbersStation Edge Processing Flow

Antenna   SDR Dongle   Local Device   Edge AI   ThrallRadio Hub

inThrall.ai Signal Intelligence Pipeline

RF Signals   DSP   AI Transcription   Event Detection   Searchable Intelligence

Planetary Electromagnetic Observation Layer

ThrallRadio Economic Ecosystem

Hosts   ThrallRadio Platform   AI Analytics   Enterprise Clients

Business Model Overview

Tier	Monthly Price	Capabilities
Community	$0	Public access, delayed feeds
Listener	$9.99	Ad■free listening, saved frequencies
Developer	$199	API access, signal feeds
Professional	$2,000	AI analytics, historical archives
Enterprise	Custom	Private deployments and modeling
